USE OF BACTERIAL VACCINE

Vaccination as Preventive for Strangles and Distemper Being Extensively Employed.

The vaccination of horses as a preventive for strangles or distemper is being extensively employed. It has been found that the cause of the disease warrants the use of a bacterial vaccine. This gives assistance to nature's own efforts of protection and forms the logical means of preventing strangles as well as other diseases

caused by specific organisms. The outcome of the vaccination of horses has in some instances been disappointing. It is possible that in such cases the bacteria has deteriorated or become ineffective, or that the results are complicated by secondary infections. In the latter case it is advisable to use bacterins that will combat the secondary infections. These are called mixed bacterins, and contain a variety of killed bacteria commonly encountered in such diseases.

In case distemper appears, all healthy animals should be immediately injected with streptobacterins. The administration of bacterial vaccines should be made by a competent veterinarian, as improper administration may not provide proper protection and so result in irregularities. Bacterins can be obtained from manufacturers of various biological products.

#### CLIPPING HORSES IN SPRING

Heavy Coat of Hair Causes Much Sweating, Which Is Enervating to Work Animals.

A good many horses come through the winter season with heavy, rough coats that are not shed when spring work begins; the result is they are uncomfortable when at heavy work. A heavy coat of hair causes much sweating, which is enervating to the horse and consequently produces an unnecessary drain upon his strength and vitality. Nor is this ail. A horse that sweats freely during the changing weather of spring is very apt to take cold. Rough, shaggy coats should be clipped in the spring before heavy

There are excellent clippers on the market for this purpose, and they can be bought at very reasonable prices. A good elipper will pay for itself in a single season on almost any farm, and sometimes it will do much more than that. If a team is laid up with a bad cold for a few days when work is pressing the loss of work may become comfortable.

#### KEEP ALL SWINE CONTENTED

One of Most Difficult Animals to Control Once It Gets Habit of Breaking Out of Pasture.

When a hog once gets the habit of getting out of its yard, pasture or whatever its enclosure may be, it is one of the most difficult animals to control. You can stop a breachy horse or cow if you build a fence high

Contented Sow.

enough, but a hog goes through. If there is no hole in the fence it makes one. Of course if the fence was so tight at first that the hog could not get through, it won't bother you the second and forty-ninth time.

Insufficient or irregular feeding, or failing to supply something which the animals crave in the feed makes hogs restless and ready to take the first chance of exploring the outside world in hopes of finding what they failed to find in their troughs.

It saves time and patience to keep them contented and at home.

#### COMFORTABLE PEN FOR SOWS Cheaper to Warm Animal With Rea-

sonably Good Building Than to Furnish Alfalfa.

Do the hogs have warm, dry beds? Remember that it is a matter of economy in rearing hogs to provide them with comfortable quarters. It is cheaper to warm a hog with a reasonably good building, with straw and litter, than to burn alfalfa hay and 60cent corn in maintaining the heat of the animal body.

#### PERMITTING RAM WITH EWES

Not Advisable to Let Him Run With Flock Longer Than Six Weeks to Prevent Accidents.

Never let the ram run with the ewes any longer than six weeks, for he will but them around and cause them to lose their lambs.

They will mostly all get with lamb sooner than this, but it is best to keep him in long enough to be sure.

Vaccinate for Blackleg. If blackleg is bad in any community

it is well to vaccinate young cattle twice a year until they are past two years old. Animals dying from the disease should be completely burned or deeply buried and the premises

Common lupines of the western range country may cause serious losses to sheep through poisoning unless the flocks are carefully managed. Horses and cuttle are not seriously affected.

#### BIG PROFIT IN SHEEP

As Safe and Attractive as Any Other Line of Stock.

Nowhere is There an Instance of Decline in Well-Established Husbandry Based on Production of Meat and Wool.

Raise sheep! This was the advice of F. R. Marshall of the bureau of antmal industry, United States department of agriculture in an address before the members of the Kansas Sheep Breeders' association at the agriculturnl college in connection with farm and home work.

"It is now time for the live-stock farmer to make sheep raising one of his regular lines of production," said Mr. Marshall. "Putting aside the cf-fects of war conditions, prospective of the American breeds, which are pervalues of lambs and wool render sheep raising fully as safe and attractive, to the man who will study and understand the business, as is the raising of cattle, horses or swine.

"Prior to 1914 such a statement as this would not have been justifiable.

Lambs on Soy Beans and Corn Pasture.

Assured ment values of the future, the need of greater economy in the use of farm labor, and the full utilization of tirely new light.

"Some agricultural journals and other authorities have been inclined to question the safety of engaging in sheep raising and base their ideas upon squabs during the colder menths unless statistical facts of decline in popular-ity of sheep in eastern states. Such vent the freezing of the eggs, or the statistical deductions are entirely mis- young after being hatched. leading, as nowhere is there an in-

marily and almost entirely for wool production and beyond the fact that they were sheep had little in common on nearly all farms.

"An important feature in is recommended by the University of Illinois, a ewe for each two acres of the farm. The small flock which has heretofore been recommended for using weeds and waste feed, and incldentally as a small source of profit, is the flock that becomes diseased and, because of its insignificance in the farm business, is certain to be neglected."

#### CABBAGE REQUIRES RICH SOIL

Early Varieties Most Acceptable as They Come When Such Food Is Needed-Grow Quickly.

Cabbage is easily grown if the soil is rich enough, and the very early varieties are most acceptable, as they come at a time when such food is most needed. The style of head varies so much that every taste should be grati-Ged. Round head or pointed head. that head or drum head, stone head and sure head, all have their vir-

Grow them quickly and feed the soil, and almost any of the standard varieties will give satisfaction. One year one kind will seem to excel and another year this same variety will be a disappointment. Much depends on the soll and the season.

Cauliflower is almost as easily grown as cabbage, but more apt to be infested with worms, and for this reason is not a favorite with the ordinary gardener.

#### SPRING WORK WITH THE BEES It is Duty of Beekeeper to Get Plenty of Bees in Time for Honey Flow

for Success.

The duty of the beekeeper in the spring is to get plenty of bees in time for the honey flow. If this is not done his work is a failure. The population of the colony is reduced during the winter, especially where wintering conditions are not the best, and this must be corrected if the colony is to get the full honey crop. It is and note whether the nostrils are poor beekeeping to have weak colonies at the beginning of the honey flow from which the surplus crop is of the wing is soiled, you may know obtained.

#### SET PLANTS IN OPEN GROUND

Harden Them Off by Gradually Reducing Water and Giving More Air-Ripens Up Wood.

Harden off all plants before setting from the house or hothed to the open ground. This is done by gradually reducing the amount of water and giving more air. It causes the plant to partly ripen up its wood, and it is thus better able to stand the change to climatic conditions outside. Plants properly "hardened off" have a doll purpl color and firm wood

QUALITIES OF HENS

American Breeds, Most Cesirable for Producing Winter Eggs, Should Be Hatched in April.

Experience has taught that the layng qualities of any breed of fowls can be much improved by always breeding from the best layers as well as can the milking qualities of cows be brought to high standard by always breeding from the best milkers. In selecting your flock for winter laving get a good bred-to-lay strain of whichever breed you choose to keep. Fowls

Silver Laced Wyandotte Hen.

haps the most desirable for producing winter eggs, should be batched in April. They then will have ample time to mature before winter sets in. If possible the pullets should have free range during the summer to enable them to grow strong and hardy frames. The parent stock must, of course, be healthy and it is better if they have a reputation as winter lay ers. Select the enriler butched but lets and one-year-old hens that molt early in the season so their new feathers will get ripened up by November. This is the foundation of your winter egg production.

#### RAISING PIGEONS FOR PROFIT

pastures place sheep raising in an en- Unless Houses Are Comdotably Warm It Is Not Wise to Grow oquabs in Cold Weather.

It is not lest to attempt to grow

When the young are hatched during very expensive. This should be avoid- stance in the United States of a decline the cole months they are very likely to ed by the use of a clipper and inci-dentally also make the horse more based on the production of both meat leaves them for food. time to clean up. The color of the feat ers of a pigeon has little to do with it utility value; but the color of its ski, is of much importance, as the dar skinned squabs are sold at a very her figure. It pays to watch one's flock ery carefully and cull out all pairs pr ducing such birds.

#### REMEDY FOR FROZEN COMBS

Thaw It Out With (10W, Rub Briskly With Alcohol and Later on Apply Vasiline.

When a fowl freezes it, comb, if the comb is still full of frost, thaw it out with snow, rub it briskly with alcohol and later apply vaseline. If the comb has thawed out when discovered, apply carbolated vaseline or even orlinary vaseline twice a day.

#### LOOK FOR RUNNING NOSES

Colds Usually Caused by Poor Ventilation, Overcrowding and Drafts-Good Cure Given.

Do your chickens have running noses? Look at the flock as they eat clogged with dirt or show a slimy ooze. If they do, and if the under cide that the birds have taken a slight cold, and conditions need changing.

Sometimes these colds come from poor ventilation; sometimes from evercrowding and piling up; sometimes from drafts. Whatever is the cause, these running noses must be cleaned up and the cause removed, or there will be constant trouble with roup and roupy colds.

Get a dime's worth of permanganate of potash crystals and dissolve in a pint of boiled water for a stock solu-tion, using enough each day to color all the drinking water, a rose tint.

# FARM: A Medicine for Women

#### For Forty Years Lydia E. Pinkham' Vegetable Compound has the Sufferings of Womes.

It hardly seems possible that there is a woman in this country who continues to suffer without giving Lydia E. Pinkham's Vegetable Compound a trial after all the evidence that is continually being published, proving beyond contradiction that this grand old medicine has relieved more suffering among women than any other medicine in the world.

Mrs. Kieso Cured After Seven Month's Illness.

Aurora, Ill.—"For seven long months I suffered from a female trouble, with severe pains in my back and sides until I became so weak I could hardly walk from chair to chair, and got so nervous I would jump at the slightest noise. I was entirely would jump at the slightest noise. I was entirely unfit to do my house work, I was giving up hope of ever being well, when my sister asked me to try. Lydia E. Pinkham's Vegetable Compound. I took six bottles and today I am a healthy woman able to do my own housework. I wish every suffering woman would try Lydia E. Pinkham's Vegetable Compound, and find out for herself how good it is."—Mrs. Karl A. Kieso, 596 North Ave., Aurora, Ill.

Could Hardly Get Off Her Bed. Cincinnati, Ohio.—"I want you to know the good Lydia E. Pinkham's Vegetable Compound has done for me. I was in such bad health from female troubles that I could hardly get off my bed. I had been doctoring for a long time and my mother said, "I want you to try Lydia E. Pinkham's Vegetable Compound." So I did, and it has certainly made me a well woman. I am able to do my house work and am so happy as I never expected to go around the way I do again. and I want others to know what Lydia E. Pinkham's Vegetable Compound has done for me."—Mrs. Jose Copner, 1668 Harrison A

Fairmount, Cincinnati, Ohio.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

Her Experience. Temperance Worker-Does Mr. Mil-Mrs. Milligan-Sure. Carry him in.
